INTRODUCTION TO PRECIOUS METALS
AAA Vault welcomes you to your future in precious metals. We ask that you take some time to carefully look over the following information.

By establishing a relationship with AAA Vault, you should feel confident and at ease with our company and ultimately your decisions. Our aims are not only to have high quality performance and services which benefit you, but that our relationship will be continuous.

Our consultants at AAA Vault may have different views on how to gain profitability in the precious metals market. Since precious metals remain to be a unique asset, we must reiterate that using risk capital is highly recommended, and assumed by AAA Vault, as precious metal markets bear risks similar to investing in all markets.

It is crucial for AAA Vault to maintain and establish the specialist-client relationship. By laying out your objectives with a AAA Specialist, your answers along with further discussion with a Specialist, will help us better build a relationship with you, thus understanding each and every client at hand and assisting with every type of aim. With our team of AAA Specialists delivering and maintaining strong and valued relationships, AAA Vault will not fail in providing you with immaculate results.

AAA Specialists value each and every relationship that is formed. In our formulaic approach to better assist you in your goals, we stand by the following protocols:

**COMMITMENT**

AAA Specialists are aware of the trust you give and the high expectations you will encounter. Our Specialists will give every single client 110% because we at AAA Vault are well aware of this and want you to feel that you can rely on us to deliver exactly what you want and expect.

**AVAILABILITY**

AAA Specialists are just a phone call or email away, any time you need assistance.

**PROFICIENCY**

Our team of experienced AAA Specialists will provide you with the professional and successful tools to keep you with your choices in precious metals. AAA Vault supplies cutting edge information to you that will assist you in any decisions you may have to make. AAA Specialists dedicate their time to making sure you are unequivocally happy with the results on your precious metals acquisitions.

AAA Vault holds the relationships developed with our clients in the highest regard. Our commitment to our clients always puts their interest first. The services we offer are our greatest advantage; they are customized to your specific needs and goals. Our clients are treated as individuals, and as such get the personalized attention they expect and deserve.

AAA Vault's diverse team of employees represents one of our greatest strengths. Our dedicated team represents a wide perspective of thought.

AAA Vault recognizes that research and analysis are key tools for our clients. We strive to consistently provide cutting edge analysis and strategies to keep our clients one step ahead of the game. It is precisely these reasons why many of our clientele come to us by way of referral, which is the ultimate endorsement of our team.

We look forward to servicing your account soon.

OUR SERVICES

- Buy and sell gold, silver, platinum, and palladium
- Full Service Storage Solution
- Up to the minute market quotes
- Place buy-and-sell or stop-loss orders
- Collateral loan facilities
- View accounts online
- Regular research reports
- Easy access to our bullion specialists
- Easily liquidate holdings
- Multi-lingual bullion specialists

ABOUT AAA VAULT

a diverse range of nationalities and languages to provide for international clientele

AAA Vault continuously monitors the precious metals arena. We will discuss with you on a regular basis scenarios on areas which we believe have unparalleled promise. Our Specialists will discuss with you the timing aspects when it comes down to buying or selling your metals.

As with all investments, the price of precious metals may change rapidly, and as such should be considered volatile. Upon entering the precious metals market, the risk of loss is solely that of the client. Only individuals who are capable of sustaining a capital loss should consider purchasing precious metals. Acquisitions in precious metals which are financed should be considered high risk.

When you do not have time to follow the metals market during the day, your AAA Specialist will do it for you. Our specialists will keep you constantly updated on current market activity while informing you on up-to-the-minute news events that could affect your holdings or trades. Our specialists are always available to discuss your account, or to give you real-time quotes any time.

All transactions on the buy or sell side will always be confirmed by your AAA Specialist, followed by a confirmation email. Clients will also receive a detailed monthly account summary.
AAA Vault continuously monitors the precious metals arena. We will discuss with you on a regular basis scenarios on areas which we believe have unparalleled promise. Our Specialists will discuss with you the timing aspects when it comes down to buying or selling your metals.

Our AAA Vault Specialists will assist you in placing orders; however no orders are executed without your expressed authorization and consent. Our clients have complete control of their accounts. For these reasons a very close-knit line of communication is kept at all times between our clients and their AAA Specialist.

ORDER PLACEMENTS

Gold is respected throughout the world for its value and rich history, which has been interwoven into cultures for thousands of years. Coins containing gold appeared around 800 B.C., and the first pure gold coins were struck during the reign of King Croesus of Lydia about 300 years later. Throughout the centuries, people have continued to hold gold for various reasons. Below are common reasons why people are turning to gold.

**HISTORY OF HOLDING ITS VALUE**

Unlike paper currency, coins or other assets, gold has maintained its value throughout the ages. People turn to gold as a way to pass on and preserve their wealth from one generation to the next.

**WEAKNESS OF THE U.S. DOLLAR**

Although the U.S. dollar is one of the world’s most important reserve currencies, when the value of the dollar falls against other currencies as it did between 1998 and 2008, this often prompts people to flock to the security of gold, which raises gold prices. The price of gold nearly tripled between 1998 and 2008, reaching the $1,000-an-ounce milestone in early 2008. The decline in the U.S. dollar occurred for a number of reasons, including the country’s large budget and trade deficits and a large increase in the money supply.

**INFLATION**

Gold has historically been an excellent hedge against inflation, because its price tends to rise when the cost of living increases. Since World War II, the five years in which U.S. inflation was at its highest were 1946, 1974, 1975, 1979 and 1980 (as of 2008). During those five years, the average real return on the Dow Jones Industrial Average was -12.33%, compared to 130.4% for gold.

**DEFLATION**

Deflation, a period in which prices contract, business activity slows and the economy is burdened by excessive debt, has not been seen globally since the Great Depression of the 1930s. During that time, the relative purchasing power of gold soared while other prices dropped sharply.

**GEOPOLITICAL UNCERTAINTY**

Gold retains its value not only in times of financial uncertainty, but in times of geopolitical uncertainty. It is often called the “crisis commodity”, because people flee to its relative safety when world tensions rise; during such times, it often outperforms other investments. For example, gold prices experienced some of their largest recent movements during periods of tension with Iran and Iraq in 2007 and 2008. Its price often rises the most when confidence in governments is low.

**INFLATION**

Gold has historically been an excellent hedge against inflation, because its price tends to rise when the cost of living increases. Since World War II, the five years in which U.S. inflation was at its highest were 1946, 1974, 1975, 1979 and 1980 (as of 2008). During those five years, the average real return on the Dow Jones Industrial Average was -12.33%, compared to 130.4% for gold.

**DEFLATION**

Deflation, a period in which prices contract, business activity slows and the economy is burdened by excessive debt, has not been seen globally since the Great Depression of the 1930s. During that time, the relative purchasing power of gold soared while other prices dropped sharply.

**GEOPOLITICAL UNCERTAINTY**

Gold retains its value not only in times of financial uncertainty, but in times of geopolitical uncertainty. It is often called the “crisis commodity”, because people flee to its relative safety when world tensions rise; during such times, it often outperforms other investments. For example, gold prices experienced some of their largest recent movements during periods of tension with Iran and Iraq in 2007 and 2008. Its price often rises the most when confidence in governments is low.

**SUPPLY CONSTRAINTS**

Much of the supply of gold in the market since the 1990s has come from sales of gold bullion from the vaults of global central banks. This selling by global central banks slowed greatly in 2008. At the same time, production of new gold from mines has been on the decline since 2000. As a general rule, reduction in the supply of gold increases gold prices.

**INCREASING DEMAND**

Increased wealth of emerging market economies has boosted the demand for gold. In many of these countries, gold is intertwined into the culture. India is one of the largest gold-consuming nations in the world, and gold has many uses there, including jewellery. As such, the Indian wedding season in October is traditionally the time of the year that sees the highest global demand for gold. In China, where gold bars are a traditional form of saving, the demand for gold has also shown rapid growth. Demand for gold has also grown among investors. Many are beginning to see commodities, particularly gold, as an investment class into which funds should be allocated.

**PORTFOLIO DIVERSIFICATION**

The key to diversification is finding investments that are not closely correlated to one another; gold has historically had a negative correlation to stocks and other financial instruments. Properly diversified investors combine gold with stocks and bonds in a portfolio to reduce the overall volatility and risk.

**CONCLUSION**

Gold should be an important part of a diversified investment portfolio because its price increases in response to events that cause the value of paper investments, such as stocks and bonds, to decline. Gold has always maintained its value over the long term. Through the years, gold has served as a hedge against inflation and the erosion of major currencies, and thus is an asset well worth considering.

As with all investments, the price of precious metals may change rapidly, and as such should be considered volatile. Upon entering the precious metals market, the risk of loss is solely that of the client. Only individuals who are capable of sustaining a capital loss should consider purchasing precious metals. Acquisitions in precious metals which are financed should be considered high risk.
FUNDAMENTAL REASONS TO OWN SILVER

Silver has always stood in the shadow of the gold market and from a dollar perspective most likely will never be more precious than gold, but it does have other value. As much as silver holds a value as a precious metal, it also holds value as an industrial metal. Silver’s properties have uses in the photography, technology, and electronic industries to name a few. To date, there is approximately 200 million ounces in above ground silver. Due to current supply/demand forecasts, the amount of above ground silver is projected to shrink to critically low levels in 2022.

New uses for silver are being invented and applied every day. The superior properties of silver have been apparent in applications for many years. Some industrial uses for silver include:

BATTERIES
Both rechargeable and disposable batteries are using silver today. Silver provides superior power to weight characteristics. By weight silver makes up 35% of most of these usually small batteries. The silver produces both higher voltages and a longer life in these types of batteries. Watches, cameras, small electronic devices, power tools, and portable TV cameras are some products which use Silver in their batteries.

BEARINGS
Bearings electroplated with silver provide greater strength and load carrying capacity. Military and heavy duty applications where a no-fail system is needed use these bearings. Every time you step on a plane you are holding your life in silvers hands. Silver coats the bearings in jet engines and provides the lubricity to avoid a catastrophic failure in the event of a lubrication failure.

BRAZING AND SOLDERING
Silver is replacing lead in solders to provide a leak proof and corrosion resistance joint. Air-conditioning, refrigeration, power distribution, electrical engineering, automobile, and the aerospace industry use silver brazing and soldering. In plumbing the bactericidal properties of silver is being touted more every day as a safer way to install plumbing in residential and commercial buildings.

CATALYST
Roughly 700 tonnes of silver are in continuous use throughout the world’s chemical industry. Silver is essential to producing the two compounds the plastics industry needs to produce flexible plastics and hard plastic; ethylene and formaldehyde. Silver is the only catalyst that will oxidize ethylene gas into ethylene oxide and worldwide production exceeds 14 million tonnes a year.
Silver has always stood in the shadow of the gold market and from a dollar perspective most likely will never be more precious than gold, but it does have other value. Silver also holds value as an industrial metal. Silver’s properties have uses in the photography, technology, and electronic industries to name a few. To date, there is approximately 200 million ounces in above ground silver. Due to current supply/demand forecasts, the amount of above ground silver is projected to shrink to critically low levels in 2022. New uses for silver are being invented and applied every day. The superior properties of silver have been apparent in applications for many years. Some industrial uses for silver include:

**BATTERIES**
Both rechargeable and disposable batteries are using silver today. Silver provides superior power to weight characteristics. By weight silver makes up 35% of most of these usually small batteries. The silver produces both higher voltages and a longer life in these types of batteries. Watches, cameras, small electronic devices, power tools, and portable TV cameras are some products which use silver in their batteries.

**COINS**
In 2006, 39.8 million ounces were produced as silver coins. Silver has been used as money as far back as 550 B.C. and continues to be issued to this day in some countries including Mexico. Since silver was more plentiful and of less value than gold, it served as a practical means of exchange. Today most of the silver produced is consumed in one form or another with only 64 million ounces per year set aside for investment purposes.

**ELECTRICAL**
Silver is the best electrical conductor of any known material and it does not corrode. Silver is used in conductors, switches, contacts and fuses. Silver is used in virtually all electrical appliances. Just the U.S. market for electrical switches is roughly 2.7 billion per year.

**PHOTOGRAPHY**
Although the digital age is reducing the amount of silver that is being used for photographic purposes, it will always remain a part of the demand structure because of its low costs and superior definition qualities. Silver is also used in x-rays. From humans, animals, steam valves, ships, aircraft or truck axels, silver x-rays remain the surest way to find faults in a structure.

**JEWELLERY AND SILVERWARE**
Silver is the most reflective metal and enjoys a prominent role in jewellery manufacturing worldwide. The demand for silver in jewellery and silverware represents a formidable component of total demand.

**WATER PURIFICATION**
Perhaps the most important use of silver is that of water purification. Silver works as a bactericide and algaecide. Silver is being used in hospitals, homes and remote communities throughout the world in need of clean water. Possibly the most pressing issue of today is clean water and the use of silver in purifying water may be the solution. Over half of the water purification systems sold in the U.S. every year employ silver. Silver purifies water of bacteria, chlorine, trihalomethanes, lead, particulates and odour. Silver prevents the build-up of algae and bacteria in the filters. New research shows silver and oxygen catalyze to produce a powerful sanitizer virtually eliminating the need for the use of chlorine.

As with all investments, the price of precious metals may change rapidly, and as such should be considered volatile. Upon entering the precious metals market, the risk of loss is solely that of the client. Only individuals who are capable of sustaining a capital loss should consider purchasing precious metals. Acquisitions in precious metals which are financed should be considered high risk.
FUNDAMENTAL REASONS TO OWN PLATINUM

Although platinum is often overlooked by many investors, there are several reasons to invest in platinum, including:

LIMITED SOURCE OF SUPPLY:
Even though more platinum is being found around the world, it is still much rarer than gold and silver. About 90% of the global platinum supply comes from South Africa and Russia, and there is uncertainty around future supply of platinum. In addition to platinum being in limited supply, it is energy and capital intensive just to get one pure ounce of platinum.

GROWING DEMAND:
There is a growing demand for platinum in both the industrial and investment spheres. Platinum is an essential industrial commodity and is used worldwide to manufacture about 20% of all consumer goods. New uses for platinum are being discovered all the time due to its resistance to corrosion, extremely high melting point, electrical conductivity, and high durability. Additionally, the investment demand for platinum has also been increasing. In the past several years, there has been an increased buying of platinum by investment funds as well as private investors, mutual funds, and pension funds.

PLATINUM TRADES TO THE LOWEST PRICE IN A DECADE AND A HALF
The summer of 2018 has not been a bullish period for most commodities prices. The stronger dollar, the prospects for rising US interest rates, and trade disputes with China and other U.S. trading partners around the world have put raw materials on the center stage as they are on the front lines when it comes to international commerce. The price of metals, energy, and agricultural commodities have all experienced selling over the recent weeks and months, but the bearish price action has hit few markets as hard as platinum which already limped into the recent period of price weakness in the asset class.

Platinum, although not as popular as gold and silver, is still a great investment metal. It’s rarity, collectability, and value makes it a great addition to any investor’s portfolio.

SUMMARY
• Platinum trades to the lowest price in a decade and a half.
• A report says the supply picture is tightening.
• Platinum is too cheap, or gold is too expensive.
• Palladium and rhodium price action is bullish for platinum.

ONE DAY THIS METAL WILL RALLY, AND THE CORRECTION COULD BE FAST AND FURIOUS.

Palladium (chemical symbol “Pd”) is primarily used as an industrial metal and is considered a “precious” metal along with platinum, gold and silver. Both palladium and platinum are far rarer than gold and represent smaller markets. Recent world production of palladium and platinum has averaged about 200 and 175 tonnes per year, respectively, while gold production tallies approximately 3,000 tonnes per year.

Also known as “white gold” or the “bright white metals,” palladium and platinum are members of the Platinum Group Metals (also known as “PGMs,” which also include ruthenium, rhodium, osmium and iridium) and typically co-occur in ore deposits. Their shared chemical origins give palladium and platinum similar characteristics, such as being relatively inert and having high melting points – part of their appeal as catalysts in industrial and automotive applications.
FUNDAMENTAL REASONS TO OWN PLATINUM

Platinum’s primary application is within the auto sector. Though historically more expensive than palladium, platinum was long the primary metal used in catalytic converters, partly because of its stability at the high temperatures required to achieve the conversion. However, in the past decade, automakers have developed technology to achieve nearly the same results with palladium, at a significantly lower cost, causing the automotive industry to transition to palladium.

While palladium is also used in jewelry, electronics, chemical and dental applications, the automotive industry’s need for catalytic converters is the primary factor driving palladium demand. If palladium’s price continues to outpace platinum’s, automakers may return to using platinum. However, analysts predict that any move back to platinum would take at least 18 to 24 months.

PALLADIUM’S SUPPLY CONSTRAINTS
Supply shortages continue to support palladium’s performance, with strong multi-year growth in palladium demand now straining a fixed supply. Palladium is especially scarce and its supply is inelastic since it is usually a by-product of ores that are being mined for other metals, like platinum and rhodium. It is rarely mined on its own. Russia is the world’s largest palladium-producing country, followed by South Africa, Canada, the U.S. and Zimbabwe.

The official level of palladium reserves in Russia is a state secret and many industry participants believe that Russia’s stockpiles of palladium have been largely sold, constraining supply. Supply concerns were further heightened in April 2018 when the U.S. levied more sanctions against Russia.

AAA VAULT AND PALLADIUM INVESTMENT

AAA Vault was put together as a brainchild of over 25 years in the financial sector. While learning and growing through the years in the brokerage business, from floor traders to being partners, directors and senior officers of multiple firms via raising capital, placing capital, and navigating equity, commodity and currency markets this firm was assembled to be the best for today’s investor. Gathering the top innovative minds in the financial work place, providing a seamless risk controlled and most cost-effective method for one to Vault his or her money all the while with the cognisance not to taking those tasks lightly. An understanding that to move forward requires patience and knowledge, AAA Vault and its specialists pride themselves on being the foremost experts in the industry by constantly challenging themselves to adapt and grow with the times. Please experience the AAA Vault difference and grow your wealth the AAA way.
Where is my precious metal investment stored?

Bullion is stored in custody with these secure institutions in the name of AAA Vault, but you negotiated through AAA Vault. The bullion is stored in the most reputable vaults worldwide. AAA Vault Advantage Account holds your investment in precious metals in the most reputable vaults worldwide. Our outstanding relationship with these vaults and refiners worldwide allows us to offer your investment at very competitive rates.

What is bullion?

Bullion is a term used to describe any product produced from a precious metal whose value is determined almost exclusively by its precious metals content. Bullion is priced in conjunction with current market “spot” value plus a premium for fabrication and shipping costs.

What are Hard Assets?

Hard assets are physical items that can also be used for another purpose. Paper money cannot be used to create another utility bill. A hard asset is an asset that can also be used for another purpose. Palladium can be used in technology, jewelry, and various other purposes. However, precious metals such as gold, silver, and platinum are hard assets.

What is the minimum or maximum amount of precious metals that I should have in my investment portfolio?

AAA Vault believes, depending on individual objectives, net worth and risk tolerance, that 10–30% of an individual’s total investment portfolio value should always be diversified in the precious metals market including gold, silver, platinum, and palladium.

Can I take possession of the precious metals?

Yes, provided all precious metals are paid for in full. You can take physical possession of paid-for precious metal investments by its precious metals content. Bullion is priced in conjunction with current market “spot” value plus a premium for fabrication and shipping costs.

What forms of payment do you accept?

AAA Vault accepts as payment certified cheques, money orders, drafts, e-transfers and bank wire transfers. Also, you are able to make AAA Vault Inc. a bill payee same as you would pay a utility bill.

How do I open an account?

Opening account is easy:

1) Fill new client account form online, Send Identification, Bank Information.
2) Fund account
3) Ready to go – start investing!

What do I receive once an order has been executed?

Once an order has been executed, you will receive a soft copy confirmation via email or facsimile. A hard copy confirmation of holdings once order is filled. Client will receive a soft copy confirmation via email or facsimile. A hard copy confirmation of holdings once order is filled.

How is the price determined when I place a buy or sell order?

The price is determined at the market price or an order to sell at a specified price above the current market price. One can always purchase precious metals for the offer price and sell precious metals for the bid price. Open orders can be placed at any chosen level but might not guarantee a fill. Speak to your AAA Vault Specialist about the different order types.

Are my prices locked in when I place an order?

Yes, provided there is sufficient capital in your investment account to fill the order.

What are the risks involved in purchasing precious metals as an investment with AAA Vault?

Before investing in precious metals, one should have a firm grasp of the precious metals market and have ample capital liquidity. Because the value of precious metals can rise or fall quickly, investing in precious metals may not be suitable for everyone. Every type of investment contains various elements of risk. Like all investments, before investing in the precious metals market, one should consult with one’s appropriate advisor.

How do I buy and sell?

Contact your AAA Vault’s Specialist, and place your buy or sell orders. Provided there is sufficient equity/funds in your account to fill the order. AAA Vault will accept as payment certified cheques, money orders, drafts, e-transfers and bank wire transfers. AAA Vault will accept as payment certified cheques, money orders, drafts, e-transfers and bank wire transfers. AAA Vault will accept as payment certified cheques, money orders, drafts, e-transfers and bank wire transfers.

Stop:

An order to purchase at a specified price below the current market price or an order to sell at a specified price above the current market price.

Limits:

An order to purchase at a specified price below the current market price or an order to sell at a price above the current market price.

FAQ

What is bullion?
Bullion is a term used to describe any product produced from a precious metals whose value is determined almost exclusively by its precious metals content. Bullion is priced in conjunction with current market “spot” value plus a premium for fabrication and shipping costs.

How do I open an account?
Opening account is easy:
1) Fill new client account form online, Send Identification, Receive Account Approval
2) Fund account
3) Ready to go – start investing!

How do I buy and sell?
Contact your AAA Vault’s Specialist, and place your buy or sell orders. Provided there is sufficient equity/funds in your account all orders will be executed immediately.

What forms of payment do you accept?
AAA Vault accepts as payment certified cheques, money orders, drafts, e-transfers and bank wire transfers. Also, you are able to make AAA Vault Inc. a bill payee same as you would pay a utility bill.

What are Hard Assets?
A hard asset is an asset that can also be used for another purpose. Paper money cannot be used to create another product. However, precious metals such as gold, silver, and palladium can be used in technology, jewelry, and various other capacities which is what helps them keep their value.

Can I take possession of the precious metals?
Yes, provided all precious metals are paid for in full. You can take physical possession of paid-for precious metal investments for minimal delivery charges.

What is the minimum or maximum amount of precious metals that I should have in my investment portfolio?
AAA Vault believes, depending on individual objectives, net worth and risk tolerance, that 10–30% of an individual’s total investment portfolio value should always be diversified in the precious metals market including gold, silver, platinum, and palladium.

Where is my precious metal investment stored?
AAA Vault Advantage Account holds your investment in precious metals in the most reputable vaults worldwide. Our outstanding relationship with these vaults and refiners worldwide allows us to offer your investment at very competitive rates negotiated through AAA Vault. The bullion is stored in custody with these secure institutions in the name of AAA Vault, but you own your assets and have the title provided. The title is given to clients through a commodity title transfer as an omnibus account holder.

How is the price determined when I place a buy or sell order?
One can always purchase precious metals for the offer price and sell precious metals for the bid price. Open orders can be placed at any chosen level but might not guarantee a fill. Speak to your AAA Vault Specialist about the different order types.

What is Limit Buy and Sell as well as Stop Buy and Sell orders?
When a customer wants to buy or sell bullion at a price different from the current market trading price, AAA Vault will accept Limit Buy and Sell as well as Stop Buy and Sell orders. The order will execute if and when the current market trading price changes sufficiently to allow execution.

Limits: An order to purchase at a price below the current market price or an order to sell at a price above the current market price. Stop: An order to purchase at a specified price below the current market price or an order to sell at a specified price above the current market price. Stop orders await execution until the market moves to the specified level where the stop is left.

Are my prices locked in when I place an order?
Yes, provided there is sufficient capital in your investment account to fill the order.

What do I receive once an order has been executed?
Once an order has been executed, you will receive a soft copy confirmation via email or facsimile. A hard copy confirmation of your precious metal investment will follow same day via post.

What are the risks involved in purchasing precious metals as investments?
Every type of investment contains various elements of risk. Because the value of precious metals can rise or fall quickly, investing in precious metals may not be suitable for everyone. Before investing in precious metals, one should have a firm grasp of the precious metals market and have ample capital liquidity. Like all investments, before investing in the precious metal markets, one should consult with one’s appropriate advisor.

How does it work when buying precious metals as an investment with AAA Vault?
Clients can always purchase precious metals for the offer price and sell precious metals for the bid price. Client can access buying and selling with an agent at AAA Vault during office hours Monday-Thursday 8:30 am-8 pm and Friday 8:30 am-4 pm. As well Clients can put in limit buy and sells that will be active outside office hours. Thus, allowing access to investing the full 24 hour, 5 ½ days a week when precious metal is traded. Client will receive a title transfer confirmation of holdings once order is filled.

You are not buying specific bars or coins but are buying and investing in good delivery bars that are held in top security vaults. This eliminates the need to pay fabrication costs. You are able to have your precious metal investment delivered for a small fee.
